## A material that leaves no wish unfulfilled.

Modern solid surfaces combine many benefits: They are almost as robust as stone, yet significantly lighter and can be easily shaped due to their thermoplastic properties. They are also water-repellent, acid-resistant and non-porous. This makes them particularly hygienic. In highly sensitive areas such as laboratories, hospitals and care facilities, as well as public sanitary areas solid surface is the first choice. The cleaning process is faster and more efficient – a benefit especially at large surfaces. The material also offers incredible design freedom. Solid surface material can be produced in many colours, shapes and patterns. The perfect material for individual design vanity units from Schäfer. Due to their versatility and flexibility, the vanity units type MWT can be excellently combined with the WC partitions from Schäfer.

### Interesting facts about MWT
